Glass Open Book

TUFF TEMP CORP.

Heat Resistant Textiles and Belting

Description: TUFF TEMP CORP. has been manufacturing high temperature resistant textile products for use within the glass industry since 1974. Our high quality patented products include Kevlar Oven Roller Tapes and Ropes for use as a spiral wrap on the quench rollers of horizontal tempering furnaces.
We also produce high temperature resistant seamless tubing and sleeving for use as roller covers in the hot end of glass bending and tempering furnaces.
We also produce high temperature resistant conveyor belting for use in the hot end of pressware and hollowware plants to help convey hot glassware articles from the moulds on up to the entrance of the annealing lehr, and unlike metal belts, our textile belts do not require the use of any expensive and polluting gas burners, helping to save your company money on energy costs, as well as providing for a healthier and cleaner work environment.
We also produce high temperature resistant Stainless Steel textile products for use on stackers and pusher bars in the hot end of the hollowware market.
For over 40 years, TUFF TEMP CORP. has been the brand name trusted and used at most of the glass industry's leading plants. TUFF TEMP CORP. has local agents and distributors in various countries around the world to enable local responsive service, and product samples can be made available when needed to enable trial testing. We welcome you to contact us with your inquiries, and thank you in advance for your time and consideration.
