AMBEG Dr. J. Dichter GmbH

Glass Forming Machines

Description:

AMBEG, founded in 1926 in Berlin, is a leading manufacturer of machines for the production of primary packaging from tubular glass worldwide. Jakob Dichter, the outstanding inventor and founder of AMBEG, was the pioneer for the automation of ampoule and vial production.

With the ampoule forming machine U3 and the vial forming machine RP he introduced revolutionary developments to the market. Today, with more than 4,000 machines sold to customers worldwide, AMBEG has significant experience and competence in the field of glass forming machines.

AMBEG is a third generation family business. Its 80 employees contribute with their skills and knowledge to innovation and customer focus.

Machine design with modern 3D CAD workstations and the machine shop with CNC machine tools enable fast and flexible production of customer requirements.

In addition to standard machines and after-forming lines for the production of vials, syringe barrels and cartridges, AMBEG also offers custom machines according to specified customer requirements.

Location: Germany
