EMP-Glass GmbH

Engineering Modelling Platinum

Follow the company

Description:	We are specialists for tailored design of Platinum systems used for melting, conditioning and feeding of hot glass. Our customers are glass manufacturers worldwide. We help them to achieve the best quality of their production. Using our scientifical background combined with our practical experience, we continually improve our understanding of processes in electrically heated Platinum systems containing molten glass. Our customer service starts usually with consultations about the planning of a new production or improving the existing one. Then we start our design work, which ends up with delivery of the complete Platinum modules including insulation,steel frame, heating control and mechanical systems. Commissioning, production optimization and after sales services are a standard part of our delivery.
Location:	Germany
Sectors:	Glass container, Flat / Float glass
Activities:	Service provider
