Glass Open Book

Fonderie Valdelsane S.p.A.

Description: Fonderie Valdelsane is internationally acknowledged as the most experienced and specialised firm in the production of rough glass moulding components.

Its specific focus on training of the staff, who have grown up with the Company, continuous modernisation of the plants, and enhancing the quality of special alloys, have been rewarded with the achievement of increasingly ambitious goals.

Today as in the past, the identity of the Foundries is strongly linked to the production of glass: a pure, immutable and safe material, which is also synonymous with environmental sustainability. The material of the future, rooted in the distant past, just like Fonderie Valdelsane.
