

Glass Open Book

VMA GmbH

VMA - Your specialist for optical and non-contact measuring techniques in the glass industry.

Description:

At Visuelle Messtechnik und Automatisierung (VMA) based in Wümbach, Germany, we have more than 50 years of experience in the glass industry and develop innovative solutions and state-of-the-art technology.

Our highly qualified engineers develop optoelectronic measuring and test systems used in the production of container glass and flat glass all over the world. We also offer special customised solutions for all your glass requirements e.g the production of tube glass and rolled glass.

Why are our systems so popular?

Our systems incorporate optical, non-contact measuring technology that reliably detects thin areas in the glass without leaving any traces. VMA products also reduce your workload because our systems do not require time-consuming recalibration, even after continuous use.

You benefit from our system know-how

We adapt our systems to your plant equipment according to your wishes and can even train your personnel. We offer an on-site service for system installation and provide rapid assistance should you have any problems or questions. Unique remote diagnostic technology and a remote maintenance service are available for larger systems used in flat glass production, for example.

Location:

Germany

Sectors:

Glass container, Flat glass, Special glass

Activities:

Equipment / Machinery supplier
