Glass Open Book

Avangard-Glass, JSC

Avangard-Glass — famous traditions, new technologies

Description:	Glass making is a technically complex process, the control of which requires substantial experience and knowledge. This industry requires continuous development and advancement to comply with the increasing requirements for quality, environmental sustainability, and diversity of glass container production according to the challenges imposed by the modern market. Maintaining and strengthening our position is only possible through the systematic growth of production capacities, improving product quality, and coordinating our efforts with business partners. Avangard-Glass represents the interests of four Russian enterprises — factories specialising in the manufacture of high-quality glass. Avangard-Glass offers several hundred products of various shapes and purposes, which possess aesthetic properties complying with the highest standards of quality and environmental safety requirements.
Location:	Russian Federation
Sectors:	Glass container
Activities:	Glass manufacturer
