Glass Open Book

VRMT Ltd

Virtual Reality: Allows IS training to be fully digitised and provides a safe and immersive training environment for the hotend of a glass plant.

Description:	Virtual Reality Machine Training Ltd provides a safe and efficient way to learn the black art of glass container manufacturing. From creating and understanding differing gob geometry to setting the IS machine timings, we have re-created the hot end of a typical glass plant that allow user's worldwide to work together in the same realistic environment and learn all about the process in a truly hands on and immersive manner. In the virtual reality workspace, a mistake that would normally have catastrophic safety and financial implications, actually becomes a outcome that can be recorded and learn't from, without the real life consequences. A glass plants own experts can share their decades long knowledge and experiences with both new and existing personnel to bring a consistent standard to the art of glass making. Since up to four people worldwide can work together, regardless of their geographical location, VR really can and does reduce a companies carbon footprint.
Location:	United Kingdom
Sectors:	Glass container
