Glass Open Book

Montage Graphix

Transparent Inks achieving high colour vibrancy and saturation since 2004.

Description:	The Montage Graphix Insert (MGI) is a custom Imaged PET for encapsulation within custom laminated safety glass. Using transparent inks, unlike other printing methods, high colour vibrancy and saturation are easily achievable, translating to a more impacting print reproduction. Also, MGI is compatible with a range of glass lamination interlayers, and therefore a range of lamination methods, including either autoclave or autoclave free, providing few restrictions to working with the product. MGI is uniquely different to other generic printed PET inserts or interlayers, and time has shown that you can have peace of mind about the durability and stability of the product, having been used in a wide range of applications to date.
Location:	Australia
Sectors:	Special glass
Activities:	Intermediate materials supplier
