Follow the company

Description:	The investors of the company have a record of building a potassium permanganate production plant as the first and only producer of potassium permanganate in the Middle East, which, in addition to creating employment for 400 people, has also prevented the import of this strategic product and the outflow of currency from the country. Currently, with the construction of a glass bottle and jar production factory with the highest technologies in the world and the use of excellent and capable consultants in this industry, and with the help of God Almighty, it will create employment for at least 200 people. With regard to several years of factory management experience in the industry, as well as complete familiarity with the production line, raw materials, products, methods and related technology, as well as the use of glass containers (bottles and jars) in the food industry. We are waiting for good things to happen in this industry. The proposed location for the implementation of the project is one of the most deprived areas of Zanjan with the highest unemployment rate, and the residents of the surrounding villages return to Tehran seasonally to find work. By setting up this factory, at least 200 people will work directly. With the passage of time and the implementation of various development plans, the recruitment rate will increase.
Location:	Iran
