# Glass Open Book

## MouldEdge LLC

Glass Mould Engineering Consulting

Follow the company

Description: A quality glass container starts since the container design conception. Once the container design is defined, the next step is to complete the mould engineering or mould design. In both processes it is important to consider not only aesthetic requirements; but also, technical requirements as the product type, container stability, strength, and other in order to ensure there are no performance problems during production.
As an independent consultancy business, MouldEdge LLC will work with your design team to provide customers with recommendations to ensure that the technical quality of the container, as well as the aesthetic requirement is of high standard.
Additionally, we can provide support to your mould repair shop on the best practices for mould equipment maintenance, repair, inspection and more.
Some of the services we provide are:
Training:

- Container Design Fundamentals.
- Mould Engineering Fundamentals (Mould Design).
- Mould Repair Shop Best Practices.
- Blankmould and Blowmould cavity displacement.
- Mould Equipment Critical Defects.

Technical Support:

- Container Design Review.
- Mould Engineering Review.
- Production & Technical Assistance.
- Mould Shop Audit.

Solutions:
