Glass Open Book

AJK Glass Consulting LLC

From container and tableware forming floors to R&D labs and pilot lines, solving problems, training teams, and delivering results worldwide.

Follow the company

Description:	AJK Glass Consulting delivers hands-on forming expertise built from nearly 30 years in both tableware and container glass manufacturing. From the shop floor to global R&D and plant support, the focus is simple: make the process work better, make the people better, and get real results. This isn't a "drop a report and leave" model. It's boots-on-the-ground support, translating data into action and helping teams close the gap between potential and production. Services cover forming troubleshooting, operator and supervisor training, process stabilization, and technology integration. Whether it's dialing in gob quality, improving loading and timing, or helping teams actually use the tech they've invested in, the approach is practical and direct. No theory without application. AJK works across the full forming process, connecting furnace and forehearth conditions to what's happening at the machine. The goal is to eliminate guesswork, reduce unnecessary adjustments, and build repeatable performance. If the process is struggling, the team is stuck, or the technology isn't delivering what was promised, that's where AJK steps in.
Location:	United States
Sectors:	Glass container, Glassware
Activities:	Service provider
